Re: WT Docket 11-65

Dear Chairman Genachowski and Commissioners:

My auto-parts stores are a regional chain which try to be on the cutting edge with our use of technology. We have 23 auto parts stores and 4 equipment stores – over half of them are in North Dakota, and most of the rest are in rural South Dakota and Montana. Many feel like we are among the most aggressive operating in “the cloud.”

For Consumers in Western North Dakota, we stand to benefit greatly from the competitive market on the horizon here with the merger of AT&T and T-Mobile. For a long time, our state has been dominated by one wireless provider. Now, the market is very competitive. It has been great for consumers, prices and service. We use wireless broadband for data as much as we do for phone calls. And I see this merger as fostering an even more competitive market and a better environment for wireless broadband for a variety of companies across the spectrum.

Personally, I use a wireless smart phone and the further our western North Dakota network is developed, the more apps and wireless tools we can use for our business. We're ready to be more mobile, more nimble and more connected.

We strongly encourage you to approve this merger. It is a sensible business transaction that is great for consumers and competition.

Thank you in advance

Dick Hedahl,
President
